Hay 166 películas de Estados Unidos que han ganado entre 5 y 9 premios ganados y producidas entre 2012 y 2014

NIVEL 2:

Ejercicio 1: Cuantos comentarios escriben los usuarios con dominio de correo “GAMEOFTHRON.ES”

```
> db.comments.countDocuments({email: /.*gameofthron\.es.*/i})  
< 22841
```

22841 comentarios

Ejercicio 2: Cuantos cines hay en cada CP del estado de Wahsington D.C.?

1- Buscar si el campo de Washington DC es realmente DC:

```
> db.theaters.distinct('location.address.state')  
< [  
  'AK', 'AL', 'AR', 'AZ', 'CA', 'CO', 'CT',  
  'DC', 'DE', 'FL', 'GA', 'HI', 'IA', 'ID',  
  'IL', 'IN', 'KS', 'KY', 'LA', 'MA', 'MD',  
  'ME', 'MI', 'MN', 'MO', 'MS', 'MT', 'NC',  
  'ND', 'NE', 'NH', 'NJ', 'NM', 'NV', 'NY',  
  'OH', 'OK', 'OR', 'PA', 'PR', 'RI', 'SC',  
  'SD', 'TN', 'TX', 'UT', 'VA', 'VT', 'WA',  
  'WI', 'WV', 'WY'
```

2- Resultado final de consola shell y a través de consulta SQL:

```
> db.theaters.aggregate([  
  {  
    $match: { "location.address.state": "DC" }  
  },  
  {  
    $group: { _id: '$location.address.zipcode', total_theaters: { $sum: 1 } }  
  }  
])  
< {  
  _id: '20002',  
  total_theaters: 1  
}  
{  
  _id: '20010',  
  total_theaters: 1  
}
```

The screenshot shows a MongoDB query editor interface. At the top, a SQL query is entered: `SELECT zipcode, count(theaterID) as total_theaters FROM theaters WHERE location.address.state = "DC" GROUP BY zipcode`. Below the query, there are tabs for `$match`, `$group`, and `$project`. The `$project` tab is selected, showing a JSON document: `{ "_id": "20002", "total_theaters": 1 }`. To the right of the document, there are three preview windows showing the output of the query. The first window shows the document `{ "_id": "20002", "total_theaters": 1 }`. The second window shows the document `{ "_id": "20010", "total_theaters": 1 }`. The third window shows the document `{ "_id": "20016", "total_theaters": 1 }`. At the bottom, there is a section for `Stage 3 | $project` with a toggle switch. It shows a JSON document: `{ "_id": 0, "zipcode": "$_id", "total_theaters": 1 }`. To the right of the document, there is a preview window showing the output of the query: `total_theaters: 1, zipcode: "20002"`, `total_theaters: 1, zipcode: "20010"`, and `total_theaters: 1, zipcode: "20016"`.
